

GROWTH THROUGH INNOVATION

STAINLESS STEEL WINE TANKS

Since the 1950s DTS have been making vats and tanks for the New Zealand food and beverage industry. We work closely with every customer to deliver a reliable design, quality fabrication and installation service.

START WITH A TOP-QUALITY TANK

Our food and beverage tanks meet the Ministry of Primary Industries standards for tank hygiene. Meticulously crafted with highly polished welds to reduce the risk of entrapment areas, ensuring a clean and contamination-free production environment.

OPEN FERMENTERS AND CLOSED TANKS

You can choose from our pre-made tank designs, or we can personalise a tank to meet your specific demands.

Our team collaborates closely with each client to provide dependable service for design, manufacturing, and installation.

LEADING WITH LEAN

We operate a lean manufacturing facility because we understand the importance of meeting our customers' needs while keeping costs under control.

We are dedicated to maximising efficiency, minimising waste, and continuously improving our processes to ensure the best possible results and the best possible value for our customers.

WARRANTY

All of our tanks come with a 60-month warranty that covers any defect in design or workmanship in the tank shell and refrigeration pads.

12-month warranty for all plastic components and product parts.

BESPOKE COOLING PAD DESIGN

At DTS, we specialise in creating custom cooling pad designs that are tailored to fit your requirements.

We own and operate New Zealand's only flatbed laser welder, which means our expert team can design and manufacture cooling pads that perfectly fit your tank size and requirements.

We can help you achieve substantial gains in cooling efficiency while simultaneously reducing your cooling expenses.

SEISMIC SAFETY

DTS tanks are designed with New Zealand conditions in mind and built to meet Seismic Design standards NZS1170.5 and NZSEE2009.

REFRIGERATION EXPERTISE

Our nationwide network of refrigeration engineers are available to ensure that your operations are running smoothly all year round.

We relentlessly look for ways we can do better. We are committed to solving industry challenges and delivering advanced solutions to our customers.

Whether you're dealing with MPI regulations, increasing volumes, power constraints or water restrictions, our experienced team of cooling experts can assist.

PRODUCT RANGE

We have a standard design range of open top and closed top fermenters from 3,500L to 40,000L.

We can custom build larger tanks in our workshop or on site:

- ✓ Our workshop is equipped to fabricate tanks up to 250,000L
- ✓ Or we can build tanks above 250,000L on site if required
